Leading Enterprises Choose YXT as Enterprise Knowledge Becomes a New Foundation for AI Productivity

Recently, iFLYTEK, Modern Farming and several other industry-leading companies entered into partnerships with YXT.com Group Holding Limited (NASDAQ: YXT). In 2026, YXT has served more than 2,000 large enterprise customers across dozens of industries, including manufacturing, automotive, healthcare, retail, financial services and energy.

Behind these partnerships is a common enterprise need: companies want to capture the knowledge, experience, workflows and best practices scattered across their organizations, and turn them into reusable organizational capabilities that can support employees, business teams and future digital agents.

As more companies move forward with AI transformation, one question is becoming increasingly important: why can some companies bring large language models into real business scenarios quickly, while others struggle to create practical value? Databricks CEO Ali Ghodsi recently noted that the bottleneck in enterprise AI transformation is no longer only model capability, but also a company's own data, knowledge and business context. For enterprises, the key question is whether AI can understand their business logic, workflows and organizational experience.

Enterprise Knowledge Is Becoming a New Factor of Production in the AI Era

Through its work with large enterprises, YXT has observed that most companies are not short of knowledge. What they often lack is a system that can continuously capture, organize, share and reuse that knowledge, and eventually make it available to AI.

Many companies already have training courses, expert experience, operating procedures, sales cases and business workflows. But these assets are often scattered across documents, courseware, meeting notes and individual employee experience. The knowledge exists, but it does not flow efficiently. The experience is valuable, but it is difficult to replicate and apply at scale.

In the past, enterprise digitalization mainly focused on information flow. ERP managed resources, CRM managed customers and OA systems managed internal processes. In the AI era, the question is shifting: how can AI understand an enterprise's roles, workflows, policies and the experience of its best employees?

Sales agents need to understand sales methodology. Customer service agents need to understand service standards. Knowledge assistants need to understand company policies. Management coaches need to understand organizational experience. Without a structured enterprise knowledge system, intelligent agents may struggle to understand the enterprise and AI may find it difficult to enter real business workflows.

YXT Is Building a Knowledge Foundation for Enterprise Intelligent Productivity

Based on this view, YXT has continued to advance its strategic upgrade in recent years. The company's shift from an enterprise learning platform to an enterprise intelligent productivity service provider is not only a change in positioning, but also a change in value logic.

In the past, enterprise learning platforms mainly focused on course management and training operations. In the AI era, enterprises need a more intelligent system that can support knowledge production, knowledge operations, role capability development and business execution.

YXT is building this capability around its new TalentNova system. Through intelligent knowledge bases, learning maps, AI-powered course creation, AI role-play and AI sales coaching, YXT helps enterprises structure, operate and apply distributed knowledge assets. The goal is to turn knowledge from static content into an intelligent asset that can be called, trained and continuously improved.

From Enterprise Software to Intelligent Productivity

In the past, enterprise software mainly competed on functionality. Going forward, competition will increasingly shift toward knowledge. Companies that can better capture organizational experience, replicate best practices faster and keep knowledge flowing between employees and intelligent agents will be better positioned to build long-term advantages.

This is YXT's understanding of intelligent productivity. It is not simply about adding an AI tool. It is about helping enterprises turn knowledge into infrastructure, experience into assets and organizational capabilities into sustainable productivity.

In the future, enterprise knowledge will no longer be just a resource library for training departments. It will become an important foundation connecting employees, intelligent agents and business workflows.

About YXT.com

YXT.com (NASDAQ: YXT) is a technology company focusing on enterprise productivity solutions. With a mission to "Empower people and organization development through technology," the Company strives to become the supreme provider in building and boosting enterprise productivity by combining over a decade of experience in tech-enabled talent learning and development and with AI-augmented task copilots and unleashing the power of knowledge and synergy. Since its inception, YXT.com has supported and received recognition from numerous Global and China Fortune 500 companies.
